

Sarthak Pandey

AI/ML Engineer — Full-stack AI & Agentic Systems

India | github.com/SarthakPaandey | linkedin.com/in/sarthak-pandey | sarthakpandey.ai

Experience

Scaler — SWE Intern

Oct 2025 – Jan 2026 | India

- Architected and deployed a production-grade campus resource management system using Next.js and TypeScript, serving 2,000+ users with concurrent-safe workflows and low-latency APIs.
- Engineered internal workflow tools, debugged production issues across backend pipelines, and designed multi-role systems with efficient state management.

TradelIndia — Product Development Intern

Jan 2025 – Mar 2025 | India

- Built conversational AI voice systems to automate lead qualification and optimized LLM context management to reduce real-time interaction latency.
- Designed exit-intent features and automated inquiry popups, improving user engagement and increasing lead conversion rates.

Projects

Persona — Agentic AI Representative | FastAPI, Next.js, Pinecone, Vapi, RAG

- Built an autonomous AI representative that answers candidate questions, explains GitHub projects, and schedules interviews through chat and voice interactions.
- Implemented a RAG pipeline over resume and GitHub data stored in Pinecone, with FastAPI APIs, Vapi voice webhooks, calendar integration, and evaluation scripts for groundedness and voice quality.

MrBully — Autonomous Accountability Agent | Kotlin, Jetpack Compose, Groq API, RoomDB

- Developed an Android accountability app that monitors distracting app usage via Accessibility Services and enforces strict phrase-based unlocks to interrupt unhealthy usage loops.
- Added deep onboarding, app restriction selection, WorkManager-scheduled daily check-ins, local persistence, and optional LLM-generated intervention messages for personalized nudges.

TrustLoop — Multi-Agent Sales Questionnaire System | Python, LLM APIs, Multi-Agent Orchestration

- Designed a multi-agent sales workflow with dedicated outreach, qualification, and follow-up agents that share conversation context through coordinated handoff logic.
- Automated lead qualification by evaluating budget, need, and timeline before routing high-intent prospects to a human sales representative.

FinTracker — AI-Enhanced Financial Platform | Next.js, MongoDB, Clerk, Gemini API

- Built a personal finance platform with interactive dashboards for expense tracking, budget planning, and AI-driven financial insights using Gemini-powered categorization and recommendations.
- Implemented secure Clerk authentication, MongoDB persistence, and a modern UI with Tailwind CSS, Shadcn/UI, Recharts, and Framer Motion, and deployed the application on Vercel.

Education

Scaler School of Technology — Undergraduate Program in Computer Science

CGR: 8.36 | Expected 2027 | India

BITS Pilani — B.Sc. (Hons.) in Computer Science

CGPA: 9.0 | Expected 2027

St. Thomas School — Class XII (ISC)

90.2% | 2022

St. Thomas School — Class X (ICSE)

94.6% | 2020

Technical Skills

Languages: Python, TypeScript, JavaScript, Kotlin, Java, C, Go, Dart

Backend & Frameworks: FastAPI, Node.js, Next.js, React.js, Django, REST APIs

AI & LLM Engineering: OpenAI, Claude, Gemini, Groq, Prompt Engineering, RAG, Agentic Pipelines, Function Calling

Vector & Retrieval: Pinecone, Chroma, Weaviate, SBERT, CLIP, HNSW, Cross-encoder reranking

Eval & Observability: BLEU, ROUGE, BERTScore, LLM-as-Judge, LangSmith, Langfuse

Tools & Cloud: Docker, Git, Firebase, MongoDB, MySQL, LangChain, LlamaIndex, Vapi

Achievements & Certifications

- Hacktoberfest 2024 – contributed to global open-source projects; member of ZOPE (Free Python web server project).
- CA '24 – Certificate of Completion | E-Cell, IIT Bombay | Jan 2024
